

joãobastos

I write code that looks like design. I make design that feels like code.

I'm a Brazilian Frontend Dev with strong Design skills, living in Germany since 2017, where I've completed two professional training programs. My stack includes React, Angular, TypeScript, Node.js, JavaScript, HTML and CSS, as well as Python, Django and PHP, extended through personal web projects and small games.

I'm communicative, driven by learning, and passionate about everything related to code, chess, pop culture and above all, video games.
